## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tan et al [5066560] in view of Hagi et al [5976750] and Matsushima et al [6602644]. Applicants' arguments and date 3/24/03 have been considered but deemed not persuasive in view of the new references. Tan et al teaches a method for producing a toner in which the coagulation agent is added to the polymerization process note Col. 10 lines 50-60. The coagulation agent is an aluminum compound note Col. 10 lines 56-57 and Table 1 and 7. The offset prevention agent is a wax and can be added to the polymerization process. The offset prevention agent can be various kinds of natural waxes such as carnauba wax Col. 11 lines 53-60. The toner can be used in various developing processes note Col.12-Col13. Tan et al fails to teach the crystalline ester (wax) or the use of external additives i.e. silica. Matsushima et al teaches a toner that uses crystalline ester compound as a release agent (offset prevention agent) note Col. 13-15. Hagi et al teaches a toner with an external additive such as silica in the range of 80-800nm to improve the transfer of the developed image and the cleaning of the photoconductor. Applicants can overcome the above rejection by stating the aluminum compound acts as a coagulation agent which is subsequently removed by washing note applicants arguments page 4. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use known external additives and wax in method of producing a toner that has the coagulation of the toner to provide the same properties to the produced toner.

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification. Page 17 line 5 note "ca" should read can.

***Double Patenting***

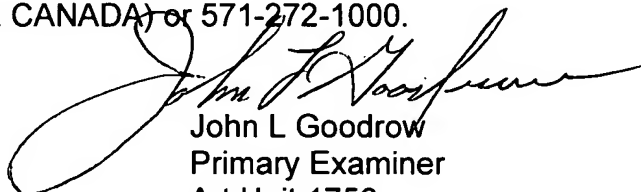

2. Claim 1 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 13 of U.S. Patent No. 7018763. Although the conflicting claims are not identical, they are not patentably distinct from each other because the toner having the physical properties is made by a method using both a crystalline ester and coagulating agent note col. 8-col 18.
